

VISUAL Business Intelligence

What is it

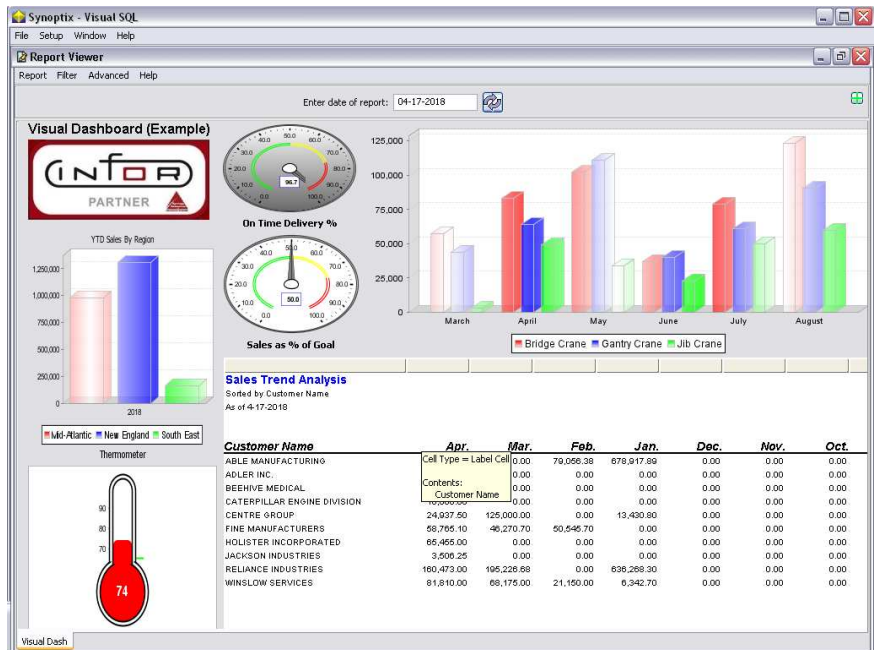

A quick and powerful reporting tool and dashboard that overcomes the technical constraints of a traditional report writer.

Who is it for

Management requiring real-time Key Performance Indicators (KPI) and overall visibility. Ideal for executives that manage-by-exception.

Who can create reports

Anyone including those without a 'systems' background can build reports

Features & Benefits

Powerful

Threaded Hyper Object Technology, i.e. each Data Field can be its own query. Unlike traditional report writers that are limited to a number of queries and sub-queries.

Predefined Data Spheres for all the business areas, Sales, Work orders, Production, Inventory, Finance

Pulls data fields onto an Excel-type template

Knowledge of Visual data tables, linking or IT experience NOT required

Users can create their own data spheres

Real-Time Update

Data Spheres are dynamic because it is read directly from the Visual database.
No data interface or warehousing required

Disparate Data Sources

Display data from other sources, e.g. Excel plus Visual onto the same report
Import Excel formats and functions

Easy to Use

Simple Excel-type design template

Drill-Down on demand

Drill down from data fields into source data (No need for sub-reports or login to Visual)

Visual Metrics

Consolidate Reports & KPIs onto a Dashboard with Graphs & Gauges

Auto-Alerts and emails

Multi-Company Consolidation

Optional Modules

Report Scheduler
Budgeting Module

Pre-requisites

Visual 6.28 and above
Visual on SQLBase, SQLServer or Oracle
VBI Database on SQLServer or PostgreSQL
